Safety, Privacy & Peace of Mind

Emergency Awareness Solution

Next Generation Protection

Both the Safety Required and Privacy Desired
Designed to go where video surveillance can't.

SITUCON SYSTEMS

Safety, Privacy & Peace of Mind

SITUCON'S EMERGENCY AWARENESS SOLUTION Protecting Your Privacy and Ensuring Your Safety

Overview

For anyone concerned with safety and security, **SITUCON'S EMERGENCY AWARENESS SOLUTION** uses innovative privacy protecting technologies, a sophisticated alerting system and on-demand video to deliver complete peace of mind. **SITUCON'S** patent pending hardware and software products provide the answer to today's "surveillance dilemma." Because invasion of privacy and civil liberty concerns rightfully limit where surveillance cameras can be placed, **SITUCON** developed privacy protecting technologies specifically to guarantee privacy by disabling camera images at all times other than when camera use is necessary.

Solution Components

INSTANT ALERT

Wireless Transmitters
Directly connects individuals
with responders

SITUCAM

Privacy Protecting Cameras
Provide both safety
and privacy protection

SITUCON MANAGER

Software Suite
System control and incident
display application

SituPoint

Wireless Access Point
Provides highly secure
interoperable wireless video

Any place people gather where privacy is a concern...

Education: K-12, Colleges, Universities

Town Halls / Municipal and Government Buildings

Recreation and Senior Centers

Private Offices / Sensitive Workspaces

Libraries

Religious Institutions

Healthcare Facilities

Maximum Safety Guaranteed Privacy

Next Generation Protection

SITUCAM Privacy Protecting Cameras remain disabled until an individual using a wireless **INSTANT ALERT** button activates the system. This in turn, immediately notifies responders and opens the camera eyelids. Responders are then able to see who is in trouble, what is happening and are provided with a floor plan including details that show how to get to reach the scene. Privacy is guaranteed, as the system is only activated when a person requests help, during a scheduled event, or by an emergency override.

Maximum Safety

SITUCON provides individuals with an immediate connection to responders by simply pushing a wireless **INSTANT ALERT** button. Individuals can quickly alert responders to potentially dangerous situations. Associated information such as the individual's name, photo and location is automatically transmitted to responders without requiring a word to be said.

Guaranteed Privacy

SITUCAM Privacy Protecting Cameras provide a clear, visible indication when they are in use. Because camera usage cannot go unnoticed, unauthorized monitoring is prevented. In addition, **SITUPOINT** Wireless Access Points remain "off-the-air" at all times except when needed. This eliminates hacking and other security risks. Also, **SITUCON'S PRIVACY PROTECTING TECHNOLOGY** immediately informs privacy advocates and regulatory parties of any camera usage, tampering or system configuration changes.

How It Works

SITUCON INSTANT ALERT

buttons directly connect individuals to responders

SITUCON MANAGER

displays who's in trouble, their photo, phone number, a floor plan and other information at the dispatch center

Text messages and emails are sent to predefined recipients indicating who is in trouble and where they are located

SITUCAM Privacy Protecting Cameras activate and "eyelids" open to provide video of the situation

SITUPOINT Wireless Access Points go "on-the-air" providing wireless access to video & incident details

On the scene responders see real-time video and obtain tactical information on their wireless laptops and smartphones
