

Unprecedented Safety and Privacy Protection

SITUCON'S EMERGENCY AWARENESS SYSTEM

Maximum Safety Guaranteed privacy

Next Generation Protection

SITUCAM Privacy Protecting Cameras remain disabled until an individual using a wireless *INSTANT ALERT* button activates the system, immediately notifying responders and opening camera eyelids. Responders see who is in trouble, what's happening and are provided a floor plan and other details showing how to get to them ASAP. Privacy is guaranteed as the system is only activated when a person needs help.

Maximum Safety

SITUCON gives individuals an immediate connection to responders by simply pushing a wireless *INSTANT ALERT* button. Individuals can quickly alert responders to potentially dangerous situations from wherever they are. Information including the individual's name, photo and location is automatically transmitted to responders without even requiring the person in trouble to say a word.

Guaranteed Privacy

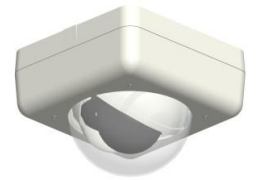

SITUCAM Privacy Protecting Cameras provide a clear visible indication when they are in use. As any camera usage cannot go unnoticed, unauthorized monitoring is prevented. *SITUPOINT* Privacy Protecting Wireless Access Points uniquely remain "off-the-air" at all times other than when needed eliminating hacking and other security risks. As an additional safeguard, *SITUCON'S PRIVACY PROTECTING TECHNOLOGY* immediately informs privacy advocates and regulatory parties of any camera usage, tampering or system configuration changes.

Wireless *INSTANT ALERT* Buttons Directly Connect Individuals with Responders and Activate Cameras
